this book is designed for professionals and students in software engineering or information technology who are interested in understanding the dynamics of software development in order to assess and optimize their own process strategies it explains how simulation of interrelated technical and social factors can provide a means for organizations to vastly improve their processes it is structured for readers to approach the subject from different perspectives and includes descriptive summaries of the best research and applications

this latest edition of coloring of plastics fundamentals offers an updated introduction to color as a science while also providing the foundation for many additional technological subjects the basic families of colorants are described along with their properties the material examines how statistical analysis can improve the consistency of colored polymer production runs as well as the colorants used to match the color other important topics covered in coloring of plastics fundamentals second edition include environmental issues and the reuse of discarded material potential problems with the interaction between colorants and other additives measurement information and matching visually and instrumentally techniques for incorporating colorants into polymers as compounds or concentrates special effect colorants polymer and colorant manufacturers plastics compounders and coating and synthetic fiber industries will acquire an enhanced appreciation of the complex technological issues a colorist must consider if a plastics coloring project is to succeed

the objectives of rubber compounding may be essentially defined as providing optimised performance and processability generally at minimum cost by the incorporation of non rubber ingredients optimised performance in this context refers not only to mechanical properties but also for example resistance to bacteria or particular chemicals in some applications a rubber may also need to be coloured or bonded to another material and further ingredients may be required for many years rubber compounding was largely empirical and frequently described as a black art today it is practised predominantly on the basis of scientific principles elucidated over years of study and is still the subject of intensive research in this new report claudie hepburn reviews the following range of compounding ingredients considering the range of materials available their particular actions and recent interesting advances process and extender oils process aids and surfactants coupling agents and adhesion promoters fire retardants bactericides and blowing agents colourants and odourants an additional indexed section containing several hundred abstracts from the polymer library provides many more examples of novel materials and their applications

plastics production comprises the main process steps synthesis reaction preparation compounding at the raw material manufacturer and compounder and processing shaping into semi finished or finished products in this handbook the central middle step preparation and compounding is discussed the preparation tasks include the removal of components the incorporation of additives and the change of particle size compounding is the incorporation of additives into a polymer or plastic the process engineering fundamentals and the specific equipment and machines used are described the specialist authors impart their knowledge from the fields of research polymer production and equipment machine production with applications in plastics technology

the study of how words are represented and processed in the mind has served as a meeting ground for research in psychology linguistics and neuroscience right now this domain of study is in the midst of astonishing developments at the core of these developments are the methodological and analytic advancements that have enabled researchers to address new phenomena and to ask new questions these new methodologies have also raised fundamental questions concerning the nature of words in the mind the nature of language processing and the ways in which data can be understood this book provides a timely resource written by international leaders in methodological innovation it offers fundamental insights into how innovative methodological approaches advance lexical research it also offers

the technical knowledge that is essential to that advancement but which is rarely found in journal reports this is a methodologically oriented volume designed to be informative thought provoking innovative and perhaps also revolutionary the contributions in this volume that originally appeared in the mental lexicon 5 3 2010 and 6 1 2011 are supplemented with several new chapters as well as with a new and timely introductory chapter titled embracing complexity

polymer compounding plays an important role in the successful use of polymers it helps to extend the properties of polymers such as durability stiffness or thermal resistance so that these properties can be incorporated into an improved end product several thousand of compounds currently used incorporate additives such as antioxidants fillers or lubricants innovation is an essential element in polymer compounding with respect to the manufacture of increasingly sophisticated products such as polymer blends and composites this book gives an idea of the productive area of polymer compounding volume 2 focusses on manufacturing technology and processing and provides an overview of the basic and fundamental aspects of polymer compounding this volume should interest students scientists and engineers and constitutes a reference text for the experimental polymer technologist written in a simple and accurate style this book can be understood even by the reader who is not familiar with polymer compounding the book is also very informative and helps give an overall view of compounding the figures are well organised with technical and economic considerations as well as consideration of the problems associated with polymer compounding therefore the book is distinctly quantitative in nature and designed to inspire a large audience of industrial and academic polymer scientists interested in the technology of polymer compounding
